

Magic View Window

FIREMAGIC

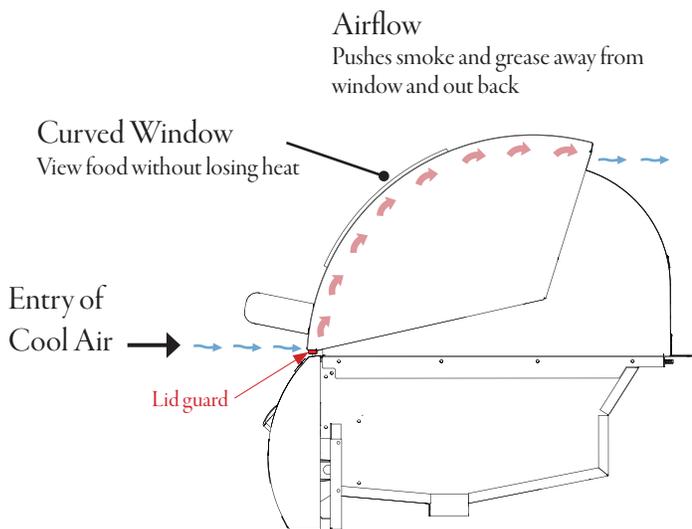

BUILT WITH PASSION. OWNED WITH PRIDE.

Fire Magic Echelon and Aurora (A790 & A660) Grills are offered with an optional **Magic View Window**, which allows you to monitor grilled foods without lifting the hood and losing valuable heat.

The Magic View Window is made of heat-resistant transparent ceramic glass. Due to its high thermal resilience, this window is not affected by extremely high temperatures or rapid temperature changes. It is designed to operate at temperatures up to 1400°F!

HOW IT WORKS

The Magic View Window has been designed for the natural air movement in the grill to keep it clean. Cool air enters the closed oven through the small gap (created by the lid guards) at the front of the grill; then it follows the contour of the hood, exiting the back. This airflow keeps smoke and grease away from the window, reducing build-up and making it easy to clean.
